Lab 10 — Grips, Hide and Isolate

WSQ Technical Drawing with AutoCAD (TGS-2021005538) · Topic 04: Organizing Objects

Tertiary Infotech Academy Pte Ltd · UEN: 201200696W · Version v12 · 18 August 2026

Objective

LO3/LO4 — edit and manage drawing objects directly (A4, K4)

Goal

Use multi-functional grips on practice drawing EX-7 to stretch, move, copy and rotate features without commands, and manage a busy view with Isolate and Hide Selected Objects.

You'll produce

An edited EX-7 layout adjusted entirely with grips, plus fluent use of isolate/hide/end-isolate.

Commands / tools: Multi-functional grips, grip modes (Enter to cycle), Isolate/Hide Objects, Select Similar

Files in this lab

- ex7.dwg
- ex7-drawing-sheet.pdf
- ex7.png

Step-by-step

1. Open ex7.dwg, click an object and hover its grips to see the grip menu
2. Stretch an endpoint grip to lengthen an edge; use the midpoint grip to move the object

   ```
   click grip → drag / type distance
   ```

3. Cycle grip modes with Enter: Stretch → Move → Rotate → Scale → Mirror

   ```
   select grip → Enter to cycle
   ```

4. Copy a feature by grip-moving with the Copy option (or Ctrl held)

   ```
   grip → Move → C (Copy)
   ```

5. Right-click a feature: Isolate Objects → Isolate Selected, edit it, then End Isolation

   ```
   ISOLATEOBJECTS · UNISOLATEOBJECTS
   ```

6. Use Select Similar to grab all matching objects and hide them temporarily

   ```
   select → right-click → Select Similar → Hide
   ```

Check your work

You can stretch/move/rotate/copy with grips alone (no typed commands), and isolate then restore any subset of the drawing without losing objects.
